

START ACTIVATING

YOUR PATH TO SETPOINT THERAPY

The steps below will guide you through the process of activating your SetPoint Therapy. SetPoint Medical will partner with your rheumatologist, surgeon, and their staff to support you through every step of the way.

1

RHEUMATOLOGIST EVALUATION

Your rheumatologist reviews your rheumatoid arthritis symptoms and treatment history, confirms you meet the indications for therapy, and ensures the SetPoint Charger fits comfortably and is easy to use.

2

SURGICAL CONSULTATION & PRE-OPERATIVE CLEARANCE

You meet with the surgeon, who confirms your surgical eligibility, reviews your medical history, and plans next steps, including follow-up after the procedure.

3

PRIOR AUTHORIZATION (IF REQUIRED)

The SetPoint team will partner with your physicians, and work with your insurance company to verify your insurance benefits and seek prior authorization for the SetPoint Therapy. Your surgical facility will be able to provide you with an estimate of the anticipated out of pocket cost for your insurance plan at this time.

4

DEVICE PLACEMENT PROCEDURE & POST-OPERATIVE VISIT

The SetPoint System is implanted during a short outpatient procedure, allowing you to return home the same day and resume most daily activities the following day. Your surgeon will meet with you within a couple of weeks of the procedure and clear you for therapy activation.

5

THERAPY ACTIVATION & ONGOING MANAGEMENT

Your therapy is activated and personalized by your rheumatologist. Once activated, you will receive automatic, daily therapy. Your rheumatologist trains you on how to charge and care for your Implant and monitors your treatment and disease activity over time.

ABOUT THE SETPOINT THERAPY

MKT-151.A

The SetPoint System is indicated for the treatment of adult patients with moderately to severely active RA who have had an inadequate response, loss of response, or intolerance to one or more biological or targeted synthetic DMARDs. Do not use if you have had a vagotomy or splenectomy, or if your healthcare provider determines that it is not safe for you to use the SetPoint System. Risks may include, but are not limited to, pain or infection after surgery, hoarseness, bruising, swelling, coughing and throat irritation.

For full safety information, please see Instructions for Use and our Important Safety Information or visit setpointmedical.com/manuals. Individual results may vary. Please consult with your health care provider to determine if the SetPoint Therapy is right for you.
